

# TUSHAR GUPTA

SOFTWARE DEVELOPER /BACKEND DEVELOPER

To Whom It May Concern,

Respected Sir/Ma'am,

I recently graduated with a Bachelor of Computer Applications from the Institute of Information Technology & Management, and I am pursuing MCA from Vivekananda Institute of Professional Studies (VIPS). I am interested in job opportunities in development/coding.

My academic journey has honed my analytical and logical abilities, making me proficient in Java, Node, Springboot, AWS Services, React, MySQL, MongoDB, Python, and more. I have applied these skills in projects like TaskSwift and the Homely Food-making app, enhancing my backend development and database management expertise.

Internships at CDAC Jasola Vihar and Clique Events provided valuable hands-on experience. At CDAC, I worked as a full-stack developer, managing core projects and integrating external tools. My role at Clique Events involved planning and executing large-scale events, which enhanced my organizational and collaborative skills.

I have also earned the AWS Certified Cloud Practitioner (CCP) certification and various other certifications, validating my understanding of technologies, services, and security.

I am detail-oriented, meticulous, and a problem-solver when managing priorities within tight deadlines. I am confident that my skills and experience make me a valuable contributor to your team. Please review my resume for additional insights. Thank you for your time and consideration.

Sincerely,

Tushar Gupta
